

QUICK GUIDE TO GAS SAFETY

from Southern California Gas Company (SoCalGas®)

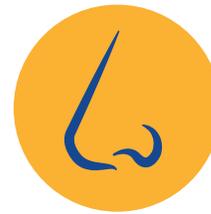

At SoCalGas, your safety is important to us.
Please keep this quick guide handy for easy reference.

- Use your senses to alert you to a gas leak. If you suspect a gas leak, don't light a match, cigarette, candle or turn on lights or electrical appliances. Immediately evacuate the area, and from a safe location, call SoCalGas at 1-800-427-2200 or call 911.
- Ready to start your next outdoor digging project? Call before you dig. Underground pipelines can be anywhere. Be sure to call 811 two business days in advance to schedule a no-cost service appointment to mark the locations of buried, utility-owned lines serving your property.
- In the event of an emergency, know where your gas meter is located and keep a 12 inch or larger adjustable wrench with your emergency supplies to shut off the meter.
- Equip your home with a carbon monoxide alarm. California's Carbon Monoxide Poisoning Prevention Act of 2010 requires that, as of July 1, 2011, all single family homes with a fossil fuel burning appliance, fireplace or attached garage be equipped with an approved carbon monoxide alarm. All other residential units must have a carbon monoxide alarm by January 1, 2013.
- Learn the approximate locations of major natural gas pipelines in your area by visiting socalgas.com (search "MAPS").
- Keep your gas appliances operating safely and efficiently. Make sure to have SoCalGas or a licensed, qualified professional check your gas appliances every year.
