SUMMARY OF DEPRECIATION RATE CALCULATIONS

The following workpapers show the SoCalGas depreciation rate calculations. The first page (BW-WP-4) shows the depreciation expense for recorded year 2009 and TY 2012. The next two pages (BW-WP-5 and BW-WP-6) show the account rates and functional group composite rates for Recorded Year 2009, which are used for Estimated Years 2010 and 2011. The last two pages (BW-WP-7 and BW-WP-8) show the development of account rates and functional group composite rates used for Test Year 2012. The 2012 Test Year depreciation rates are calculated using proposed life and salvage parameters based on updated studies. SoCalGas believes the studies to be in complete conformance with the CPUC's "Determination of Straight-Line Remaining Life Depreciation Accruals" Standard Practice U-4.

RETIREMENTS, COST OF REMOVAL, AND SALVAGE

Forecasted retirements, cost of removal and salvage are estimated by functional group for As Expected year 2010 and 2011 and for the Test Year 2012. The retirements are credited to forecasted depreciable plant and debited to the forecasted accumulated reserves. Cost of removal is debited and salvage is credited to the forecasted accumulated reserves.

Retirements

Estimated retirements are calculated using a ratio of a five-year average of historical retirements to a five-year average of historical plant balances. The ratio is then applied to forecasted plant balances which result in future estimated retirements. The annual retirements for a given year are allocated to the months on the basis of monthly additions. As stated above, the estimated retirements are a credit to plant and a debit to accumulated depreciation.

Cost of Removal and Salvage

The estimated 2010 – 2011 cost of removal is derived from historical trend using the average of 2008 and 2009 recorded data multiplying by a factor relative to the increase of capital expenditures in years 2010 through 2012. The estimated salvage for Expected year 2010 and 2011 and for the Test Year 2012 is derived by averaging the five-year history of salvage as a percentage of a five-year history of plant retirements. These percentages are applied to forecasted retirements (2010-2012). Cost of removal is a debit to the accumulated reserves and salvage is a credit to the accumulated reserves.

SIMULATED PLANT BALANCE LIFE ANALYSIS (SPR)

Workpaper BW-WP-111 depicts a summary and ongoing comparison of the historical authorized 2004 COS Iowa Curve selections and lives, the currently authorized 2008 GRC Iowa Curve selections and lives, and the proposed TY 2012 Iowa Curve selections and lives.

The SPR balance method was used in determining the best fit Iowa Curve selection for many accounts.

Propose that General Plant accounts retain currently authorized Iowa curves and average service lives.
